Why Oils?

Before pharmaceutical creams, synthetic supplements, and mass-produced medicine, every culture on earth developed sophisticated knowledge of plant-derived oils. The ancient Egyptians used castor and moringa oil in surgical procedures. The Greeks documented olive oil's cardiovascular benefits. The Mapuche people of the Andes used rosehip oil to heal burns and fade scars. The Aboriginal Australians applied tea tree to wounds. The Ayurvedic physicians of India built entire therapeutic systems around sesame and coconut oil.

This was not superstition. These civilisations were empirical — they observed, documented, and refined their protocols over centuries and millennia. What they had was the equivalent of a very large clinical trial: generation after generation of human experience.

Modern science has largely confirmed what these traditions discovered. The compounds in plant oils interact with human biology at the molecular level — binding to receptors, inhibiting inflammatory enzymes, supporting cellular repair, and nourishing the very structures that synthetic products attempt to imitate.

This guide is not about trends or marketing. It is a documentation of what works, why it works, and how to use it.

"Let food be thy medicine, and medicine be thy food." — Hippocrates, 400 BC

How to Read This Guide

Each oil entry contains: the origin and botanical source, the key active compounds and their mechanisms of action, specific application protocols for each therapeutic use, dosage guidance, sourcing criteria, and relevant safety notes. Where clinical evidence exists, it is referenced. The goal is not to simply list benefits — it is to explain the mechanism so you understand why the oil works and how to maximise its effect.

Carrier Oils vs Essential Oils

This guide covers two distinct categories of oil that are often confused:

	CARRIER OILS	ESSENTIAL OILS
Source	Seeds, nuts, fruits — pressed	Leaves, flowers, bark — distilled
Concentration	Used undiluted	Highly concentrated — always dilute
Evaporation	Do not evaporate	Volatile — evaporate quickly

Internal Use	Often safe (varies)	Very few are safe check individually
Examples	Olive, coconut, rosehip, argan	Lavender, tea tree, frankincense

Quality, Sourcing & Storage

What "Cold-Pressed" Actually Means

Cold-pressing extracts oil mechanically at temperatures below 49 C (120 F). Above this temperature, sensitive compounds — particularly polyunsaturated fatty acids, vitamins, and polyphenols — begin to degrade. Many commercial oils labelled as cold-pressed are not genuinely cold-pressed. Look for "first cold press" and ideally a processing temperature statement.

What to Avoid

Refined, bleached, or deodorised (RBD) oils have been chemically processed to remove colour, odour, and impurities — and in doing so, most of the therapeutic value. Hexane-extracted oils (particularly coconut and castor) may contain residual solvent traces. "Light" or "pure" olive oil is refined oil. These should be avoided for therapeutic purposes.

How to Assess Quality

Colour, aroma, and flavour (for edible oils) are your primary indicators. Genuine extra virgin olive oil is bitter and peppery. Virgin coconut oil smells of fresh coconut. High-quality rosehip oil is deep orange-red. Any oil that is colourless and odourless has been refined. The richer the colour and more pronounced the scent, generally the higher the therapeutic value.

Storage Principles

Heat, light, and oxygen are the enemies of oil quality. Store in dark glass bottles (never clear plastic or clear glass). Keep away from heat sources. Refrigerate rosehip, evening primrose, and other polyunsaturated-rich oils after opening. A rancid oil smells waxy, crayon-like, or of old paint — discard and replace. Most carrier oils last 6–24 months from production.

CARRIER OIL

Olive Oil

MEDITERRANEAN BASIN

Skin & Heart

Olive oil is perhaps the most studied and celebrated oil in human history. First cultivated over 6,000 years ago in the Mediterranean, it has been called liquid gold by ancient civilisations and modern science has confirmed why. Cold-pressed extra virgin olive oil contains over 200 identified compounds, many of which have no synthetic equivalent.

Active Compounds & Mechanisms

Oleic Acid (Omega-9)

Makes up 55-83% of olive oil. A monounsaturated fatty acid that penetrates deeply into skin, supports cardiovascular health, reduces LDL cholesterol, and has demonstrated anti-inflammatory effects at the cellular level.

Oleocanthal

A phenolic compound that inhibits the same enzymes (COX-1 and COX-2) targeted by ibuprofen. Studies suggest regular consumption produces a measurable anti-inflammatory effect equivalent to low-dose NSAIDs.

Squalene

A natural antioxidant found in sebum. Protects skin from UV-induced oxidative damage, slows lipid peroxidation, and is deeply moisturising without clogging pores.

Polyphenols

Including hydroxytyrosol and oleuropein among the most potent natural antioxidants known. Protect cells from oxidative stress, reduce arterial inflammation, and support healthy ageing.

Application Protocols

Skin	Apply directly to dry skin or mix with essential oils as a carrier. Particularly effective on eczema, psoriasis, and dry patches. Use as a facial oil cleanser dissolves sebum while nourishing skin.
Hair	Warm slightly and apply to scalp. Leave for 30 minutes before washing. Penetrates hair shaft to restore moisture and reduce breakage. Use weekly as a deep conditioning treatment.
Internal	Consume 1-2 tablespoons of cold-pressed EVOO daily. Best consumed raw on salads, drizzled on food, or alone. Heat above 180 C degrades beneficial compounds.
Oral Health	Oil pulling swish 1 tablespoon for 10-15 minutes. Reduces harmful oral bacteria, whitens teeth over time, and supports gum health.

DOSAGE	1-2 tbsp daily internally. Topically apply liberally as needed. No upper limit for external use.
SOURCING	Always buy cold-pressed, extra virgin, and ideally single-origin. Look for harvest date on the bottle (not just expiry). Best within 18 months of harvest. Dark glass bottles only.
SAFETY	Comedogenic rating: 2/5. May clog pores for some acne-prone skin types when used as facial oil. Start with small amounts.

CARRIER OIL

Coconut Oil

TROPICAL ASIA & PACIFIC

Skin, Hair & Gut

Coconut oil is perhaps nature's most versatile oil. Its unique fatty acid composition – predominantly medium-chain triglycerides (MCTs) – makes it behave differently from almost every other oil. It is simultaneously an antimicrobial, a deep moisturiser, a gut health supporter, and a hair treatment. Used across South Asia, Southeast Asia, and Polynesia for thousands of years.

Active Compounds & Mechanisms

Lauric Acid (C12)

Makes up ~50% of coconut oil. When metabolised, converts to monolaurin – a compound with powerful antimicrobial properties effective against bacteria, viruses, and fungi including Candida. The same compound found in human breast milk.

Medium-Chain Triglycerides (MCTs)

Unlike long-chain fatty acids, MCTs are absorbed directly into the portal vein and transported to the liver, where they are converted rapidly into energy. This makes coconut oil uniquely supportive of metabolic function.

Caprylic Acid (C8)

The most ketogenic MCT. Rapidly converts to ketones, providing fast cellular energy. Also a potent antifungal, particularly effective against Candida overgrowth in the gut.

Application Protocols

Skin	Apply to body skin as daily moisturiser. Forms a protective barrier that retains moisture. Highly effective on cracked heels, elbows, and stretch marks.
Hair	Unique ability to penetrate hair shaft (unlike most oils which coat). Apply to dry hair 30–60 minutes before washing. Reduces protein loss by up to 39% according to research.
Gut Health	1 tablespoon daily – taken plain or added to smoothies. Supports gut microbiome, reduces pathogenic bacterial overgrowth, and reduces intestinal permeability.
Oil Pulling	1 tablespoon swished for 15–20 minutes. The MCTs in coconut oil are particularly effective at binding to bacteria in the oral cavity.
DOSAGE	1–3 tbsp daily internally. Start with 1 tsp and increase gradually to avoid digestive discomfort from MCTs. Topically unlimited.

SOURCING	Always buy virgin, unrefined, cold-pressed. Avoid RBD (refined, bleached, deodorised) these products have been stripped of beneficial compounds. Should smell of fresh coconut.
SAFETY	Comedogenic rating: 4/5. Do not use on face for acne-prone skin. Some people experience loose stools when starting internally start with small doses.

CARRIER OIL

Rosehip Oil

CHILEAN ANDES, SOUTH AMERICA

Skin Repair & Regeneration

Derived from the seeds of *Rosa canina* and *Rosa moschata*, rosehip oil has been used by the Mapuche people of the Andes for centuries to heal wounds, burns, and scars. It contains the highest naturally occurring concentration of trans-retinoic acid (vitamin A) outside pharmaceutical retinol, as well as exceptional levels of vitamins C and E. Modern dermatology has confirmed it as one of the most potent natural skin regenerators known.

Active Compounds & Mechanisms

Trans-Retinoic Acid (Vitamin A)

Stimulates collagen synthesis, accelerates cell turnover, reduces hyperpigmentation, and fades scarring. The same mechanism targeted by pharmaceutical retinol, but in a naturally bioavailable form that is significantly less irritating.

Linoleic Acid (Omega-6)

Makes up ~45% of rosehip oil. Essential for maintaining the skin's barrier function. Deficiency of linoleic acid in the skin is directly associated with acne, eczema, and barrier dysfunction.

Vitamin C (Ascorbic Acid)

A potent antioxidant that inhibits melanin production (reducing dark spots), stimulates collagen synthesis, and protects against UV-induced damage.

Lycopene & Beta-Carotene

Powerful antioxidants that neutralise free radicals in the skin, slowing photoageing and protecting against environmental damage.

Application Protocols

Face	Apply 2-3 drops to cleansed, slightly damp skin morning and evening. Gently press into skin do not rub. Works synergistically with vitamin C serums.
Scars & Stretch Marks	Apply directly to affected area twice daily. Clinical studies show measurable reduction in scar tissue with consistent use over 6-12 weeks.
Hyperpigmentation	Apply to dark spots morning and evening. Results typically visible within 6-8 weeks of consistent use.
Nails & Cuticles	Massage into cuticles daily to strengthen nails and prevent brittleness.

DOSAGE	Topical only. 2-4 drops for full face. Do not take internally.
SOURCING	Buy cold-pressed, unrefined rosehip seed oil (not rosehip fruit oil – these are different). Dark orange-red colour indicates high carotenoid content. Store in refrigerator after opening.
SAFETY	May cause purging in some skin types when first introduced (initial breakout). Start with every other day application. Avoid if pregnant without medical guidance due to vitamin A content.

ESSENTIAL OIL

Tea Tree Oil

NEW SOUTH WALES, AUSTRALIA

Antimicrobial & Antiseptic

Derived from the leaves of *Melaleuca alternifolia*, tea tree oil has been used by the Aboriginal peoples of Australia for thousands of years – primarily by crushing the leaves and inhaling the vapour, or applying directly to wounds. British scientists began studying it in the 1920s, confirming it as a broad-spectrum antimicrobial effective against bacteria, viruses, and fungi. It is one of the most studied natural antiseptics in clinical literature.

Active Compounds & Mechanisms

Terpinen-4-ol

The primary active compound – makes up 30–48% of quality tea tree oil. Disrupts the cell membranes of bacteria and fungi, causing cell death. Effective against *Staphylococcus aureus* including MRSA strains.

1,8-Cineole

Provides anti-inflammatory and expectorant properties. Concentration should be below 10% in quality oil – higher concentrations increase skin irritation risk.

Alpha-Terpineol

A secondary antimicrobial compound that works synergistically with terpinen-4-ol to enhance bactericidal activity.

Application Protocols

Acne	Dilute to 5% in carrier oil (1 drop tea tree : 19 drops carrier). Apply with cotton bud directly to blemishes. Clinical trials show 5% tea tree gel equivalent efficacy to 5% benzoyl peroxide with fewer side effects.
Fungal Infections	Dilute to 25–50% in carrier oil for toenail fungus. Apply twice daily directly to affected nail. Allow to penetrate for 30 minutes before covering.
Scalp Health	Add 10 drops to your regular shampoo. Effective against dandruff-causing <i>Malassezia</i> fungus. Leave on scalp for 3 minutes before rinsing.
Household Antiseptic	Add 20 drops to 500ml water in spray bottle for surface cleaning. Effective against most common pathogens without toxic residue.
DOSAGE	NEVER take internally. Always dilute before skin application. Standard dilution: 5% for face, 10–15% for body.
SOURCING	Buy 100% pure <i>Melaleuca alternifolia</i> oil with terpinen-4-ol content above 30% and 1,8-cineole below 10%. Australian-origin is the gold standard.

SAFETY	Toxic if swallowed. Do not use undiluted on skin. Keep away from children and pets toxic to dogs and cats even in small amounts.
--------	---

ESSENTIAL OIL

Lavender Oil

PROVENCE, FRANCE & MEDITERRANEAN

Calm, Sleep & Healing

Lavender is one of the oldest and most widely studied medicinal plants. Used by ancient Egyptians, Greeks, and Romans for perfume, wound healing, and calming the mind lavender essential oil (*Lavandula angustifolia*) contains compounds that directly modulate the nervous system. It is one of the rare essential oils considered safe for direct skin application without dilution in adults.

Active Compounds & Mechanisms

Linalool

The primary calming compound. Acts on GABA receptors the same receptors targeted by pharmaceutical anxiolytics and sleep medications. Multiple clinical studies confirm measurable reduction in cortisol and anxiety markers.

Linalyl Acetate

Anti-inflammatory and antispasmodic. Relaxes smooth muscle, which explains lavender's effectiveness on tension headaches, muscle spasms, and digestive cramping.

Ocimene & Beta-Ocimene

Antifungal and antiviral properties. Contribute to lavender's wound healing and antimicrobial activity.

Application Protocols

Sleep	Apply 2-3 drops to pillow, or diffuse 5-8 drops in bedroom 30 minutes before sleep. Alternatively, apply 1-2 drops to wrists and behind ears. Clinical studies show improved sleep quality and reduced night waking.
Anxiety	Inhale directly from bottle or apply to pulse points during acute anxiety. Oral supplementation (Silexan, a licensed lavender oil preparation) has shown equivalence to lorazepam in trials.
Burns & Wounds	Apply 1-2 drops undiluted directly to minor burns. Accelerates healing and reduces scarring. René-Maurice Gattefossé first documented this in 1937 after accidentally burning his hand.
Headaches	Apply 1-2 drops to temples and back of neck. Inhale deeply. Effective for tension headaches within 15-30 minutes.
DOSAGE	Topical: apply undiluted in small amounts. Diffusion: 5-8 drops per session. Avoid during first trimester of pregnancy.

SOURCING	Lavandula angustifolia (true lavender) only avoid lavandin (Lavandula x intermedia) which has different and less therapeutic properties. Look for GC/MS (gas chromatography) testing certificates.
SAFETY	Avoid oral ingestion without medical supervision. May have hormonal effects with prolonged heavy topical use in prepubescent boys.

ESSENTIAL OIL

Lemon Oil

MEDITERRANEAN & CALIFORNIA

Detox, Energy & Cleansing

Cold-pressed from the peel of Citrus limon, lemon oil is one of the most uplifting and cleansing oils in the natural pharmacy. It contains an exceptionally high concentration of d-Limonene, a compound that has been the subject of extensive research for its effects on the liver, digestive system, and mood. It is the oil most associated with the concept of alkalising the body though paradoxically acidic, its metabolic ash is alkaline.

Active Compounds & Mechanisms

d-Limonene

The dominant compound at 60-70%. A potent liver detoxifier that induces Phase I and Phase II liver enzymes. Has demonstrated significant activity against gastric reflux, dissolving gallstones, and supporting the body's natural detoxification pathways.

Beta-Pinene

Provides the sharp, fresh top note of lemon oil. Antimicrobial and bronchodilatory useful for respiratory support and clearing the airways.

Citral

The compound responsible for the characteristic lemon scent. Antimicrobial, anti-inflammatory, and has shown activity in supporting healthy lipid profiles.

Application Protocols

Internal Detox	Add 1 drop food-grade lemon oil to 500ml water. Consume morning on empty stomach. Stimulates bile production and liver enzyme activity. NOT the same as adding fresh lemon juice.
Energy & Focus	Diffuse 4-6 drops or inhale directly. Studies show lemon scent improves alertness, concentration, and mood measurably reducing cortisol markers.
Skin Brightening	Add 2-3 drops to carrier oil and apply to hyperpigmented areas at night only (photosensitive). Or add to your cleanser.
Cleaning	Add 20 drops to 500ml water with a tablespoon of vinegar for the most effective and non-toxic all-purpose cleaner. Eliminates Salmonella, Staphylococcus, and E. coli.
DOSAGE	Internal: 1 drop food-grade oil per 500ml water, once daily. Topical: always dilute. Avoid sun exposure for 12-18 hours after topical application.

SOURCING	For internal use, ensure food-grade or GRAS (generally recognised as safe) status. Cold-pressed only not steam distilled. Citrus limon from Italy (Amalfi Coast) or California for highest quality.
SAFETY	Phototoxic causes photosensitivity. Never apply before sun exposure. Avoid in high concentrations during pregnancy.

ESSENTIAL OIL

Frankincense Oil

OMAN, SOMALIA & ETHIOPIA

Cellular Health & Anti-Ageing

Frankincense derived from the resin of Boswellia sacra and Boswellia serrata trees has been called the king of oils. Used in Egyptian medicine, ancient Jewish and Christian ritual, and Ayurveda for over 5,000 years, it is perhaps the oil with the broadest spectrum of documented therapeutic activity. Its primary bioactive compounds, boswellic acids, have been the subject of hundreds of modern clinical studies.

Active Compounds & Mechanisms

Boswellic Acids (AKBA)

Acetyl-11-keto-beta-boswellic acid is one of the most potent natural anti-inflammatory compounds known. It specifically inhibits 5-lipoxygenase (5-LOX), an enzyme responsible for producing pro-inflammatory leukotrienes. This mechanism is uniquely different from NSAIDs, making it effective where standard anti-inflammatories fail.

Alpha-Pinene

Crosses the blood-brain barrier. Inhibits acetylcholinesterase the same enzyme targeted by Alzheimer's medications suggesting potential cognitive protective effects.

Incensole Acetate

Demonstrated anxiolytic and antidepressant activity in research. Activates TRPV3 channels in the brain, producing psychoactive effects associated with the meditative and spiritual use of frankincense throughout history.

Application Protocols

Anti-Ageing	Dilute 3% in rosehip or jojoba oil and apply to face. Stimulates collagen and elastin production, tightens skin, reduces fine lines. The most effective natural alternative to retinol for anti-ageing.
Inflammation	Apply to joints, muscles, or inflamed areas diluted in carrier oil. Or take Boswellia serrata supplement internally. Clinical trials show significant reduction in arthritic pain within 4-8 weeks.
Mental Clarity	Diffuse 3-5 drops during meditation, work, or study. The incensole acetate crosses the blood-brain barrier within minutes of inhalation.
Wound Healing	Apply 1-2 drops diluted to wounds, scars, or stretch marks. Significantly accelerates healing and reduces scar formation.
DOSAGE	Topical: 2-3% dilution. Diffusion: 3-5 drops. Internal supplementation as Boswellia extract (standardised to AKBA) rather than essential oil.

SOURCING	Boswellia sacra (Omani, from Dhofar region) is considered the finest quality. Boswellia serrata (Indian) is the most clinically studied. Avoid cheap steam-distilled varieties look for CO2-extracted.
SAFETY	May increase effects of blood-thinning medications. Avoid high doses internally during pregnancy. Over-harvesting has made some Boswellia species endangered buy from ethical suppliers.

ESSENTIAL OIL

Peppermint Oil

ENGLAND & PACIFIC NORTHWEST USA

Focus, Digestion & Pain Relief

Mentha piperita is a natural hybrid of watermint and spearmint, cultivated for over 3,000 years. Its primary compound, menthol, activates cold-sensitive TRPM8 receptors in the nervous system – creating a profound cooling and analgesic effect without actually lowering temperature. It is one of the most clinically studied essential oils, with particularly strong evidence for digestive conditions and cognitive performance.

Active Compounds & Mechanisms

Menthol (35-55%)

Activates TRPM8 (cold receptor) channels, creating immediate cooling and analgesic effects. Dilates airways, reduces pain perception, and stimulates blood flow. Local anaesthetic properties clinically comparable to lidocaine for topical pain.

Menthone (10-30%)

Contributes to digestive antispasmodic activity. Relaxes smooth muscle in the gastrointestinal tract, relieving IBS cramping and spasm.

Menthyl Acetate

Provides the characteristic fresh scent. Anti-inflammatory and has demonstrated antipruritic (anti-itch) activity.

Application Protocols

Focus & Alertness	Inhale directly or diffuse during work or study. A 2016 study found inhaling peppermint oil significantly increased memory, alertness, and problem-solving performance. Apply 1 drop to temples (avoid eyes).
IBS & Digestion	Enteric-coated peppermint oil capsules (0.2ml, 3x daily) – the only natural treatment with Level A evidence for IBS from the British Dietetic Association. Topically, dilute and massage clockwise on abdomen.
Headaches	Dilute 10% in carrier and apply to forehead and temples. Clinical trial showed equivalent efficacy to 1000mg paracetamol for tension headaches.
Muscle Pain	Dilute 5-10% in carrier and apply to painful muscles. The menthol-induced vasodilation increases blood flow and reduces lactic acid buildup.
DOSAGE	Topical: 5-10% dilution. Diffusion: 3-5 drops. Capsules: 0.2-0.4ml enteric-coated 3x daily for IBS.

SOURCING	Mentha piperita only. Look for menthol content between 35-55%. Willamette Valley (Oregon) and English varieties are highest quality.
SAFETY	Never apply near face of infants or children – can cause respiratory distress. Avoid if taking cyclosporin. May reduce absorption of iron supplements.

CARRIER OIL

Castor Oil

EAST AFRICA & INDIA

Hair Growth, Lymph & Inflammation

Derived from the seeds of *Ricinus communis*, castor oil has been used medicinally for over 4,000 years by ancient Egyptians, Chinese herbalists, and Ayurvedic practitioners. Its extraordinary viscosity comes from its uniquely high concentration of ricinoleic acid (85-95%), a hydroxylated fatty acid found in almost no other natural oil. This compound is responsible for its profound effects on circulation, inflammation, and lymphatic function.

Active Compounds & Mechanisms

Ricinoleic Acid (85-95%)

The most unique fatty acid in the plant kingdom. Binds to EP3 prostaglandin receptors, stimulating smooth muscle contraction and modulating inflammatory signalling. This action explains castor oil's effects on hair growth, lymph flow, and uterine contractions.

Undecylenic Acid

A potent antifungal that makes castor oil exceptionally effective against fungal skin and nail infections.

Vitamin E (Tocopherols)

Provides antioxidant protection and deep skin moisturisation. Supports the skin barrier and reduces transepidermal water loss.

Application Protocols

Hair Growth	Warm slightly and massage into scalp for 5 minutes. The ricinoleic acid stimulates prostaglandin E2 receptors associated with hair follicle growth. Leave overnight. Use weekly for measurable results within 8-12 weeks.
Lymphatic Drainage	Castor oil packs – soak cloth in castor oil, apply to lower abdomen, cover with plastic, apply heat for 45-60 minutes. Traditionally used to stimulate lymph flow and reduce inflammation in abdominal organs.
Joint Pain	Warm and massage into affected joints. The ricinoleic acid penetrates deeply and inhibits leukotriene B4 production – a key inflammatory mediator in arthritis.
Eyelash & Eyebrow Growth	Apply tiny amount with clean mascara wand nightly. Results typically visible within 4-6 weeks.
DOSAGE	Topical only for therapeutic use. For oral use as laxative: 15ml maximum, once only – not for regular use.

SOURCING	Hexane-free, cold-pressed, 100% pure. Jamaican Black Castor Oil (JBCO) is roasted and has a different profile useful for hair but not for the same therapeutic purposes.
SAFETY	Do not take internally during pregnancy stimulates uterine contractions. Conduct patch test: some people have allergic reactions. Very thick consistency mix with lighter carrier for facial application.

CARRIER OIL

Argan Oil

SOUSS-MASSA-DR A, MOROCCO

Skin, Hair & Anti-Ageing

Extracted from the kernels of the *Argania spinosa* tree – a species native exclusively to southwestern Morocco – argan oil has been used by Berber women for centuries for skin, hair, and culinary purposes. The *Argania* tree is ancient, estimated at 80 million years old, and has co-evolved with the landscape to produce a uniquely complex oil. It is one of the rarest and most valuable plant oils on earth.

Active Compounds & Mechanisms

Oleic Acid + Linoleic Acid

An exceptional 1:1 ratio of omega-9 and omega-6 fatty acids that closely mirrors the composition of human sebum. This makes argan oil uniquely compatible with the skin's natural barrier system.

Tocopherols (Vitamin E)

Contains up to 620mg/kg – nearly three times the vitamin E content of olive oil. This exceptional antioxidant concentration is why argan oil has a naturally long shelf life and provides significant protection against photoageing.

Squalene

At ~1% concentration, argan oil's squalene content provides UV protection, antioxidant activity, and deep moisturisation without occlusion.

Polyphenols

Including caffeic acid and oleuropein – contribute to anti-inflammatory activity and support the oil's exceptional oxidative stability.

Application Protocols

Face	Apply 2–3 drops to clean skin morning and evening. Absorbs quickly without greasiness. Suitable for all skin types including oily and acne-prone skin due to its sebum-balancing properties.
Hair	Apply to wet or dry hair as a finishing oil or treatment. A few drops through mid-lengths and ends eliminates frizz, adds shine, and provides heat protection.
Nails	Massage into cuticles and nail plate daily. Restores moisture to brittle nails and damaged cuticles.
Anti-Ageing Face Treatment	Mix 3 drops argan with 1 drop frankincense in palm. Press into skin morning and night. The combined antioxidant and collagen-stimulating activity is measurably superior to either oil alone.

DOSAGE	Topical only for cosmetic use. Culinary argan oil (toasted) is edible 1 2 tablespoons daily in food.
SOURCING	Only buy from certified cooperatives in Morocco look for UNESCO certification or Fair Trade credentials. Adulteration with soybean or sunflower oil is extremely common. Authentic argan oil has a nutty aroma.
SAFETY	Nut allergy sufferers should patch test first. Cosmetic and culinary argan oil are different products do not substitute.

Condition Index

Use this index to find which oils to use for specific conditions.

CONDITION	RECOMMENDED OILS
Acne & Breakouts	Tea Tree (5% dilution), Rosehip, Frankincense
Ageing & Fine Lines	Frankincense, Rosehip, Argan Oil
Anxiety & Stress	Lavender, Frankincense
Arthritis & Joint Pain	Castor Oil packs, Frankincense (Boswellia), Peppermint
Brain Fog & Focus	Peppermint (inhalation), Frankincense (diffusion), Lemon
Burns & Wound Healing	Lavender, Frankincense, Castor Oil
Dandruff	Tea Tree (in shampoo), Coconut Oil scalp treatment
Dark Spots & Hyperpigmentation	Rosehip, Lemon (evening), Argan
Dry Skin	Olive Oil, Coconut Oil, Argan Oil
Eczema & Psoriasis	Castor Oil, Olive Oil, Coconut Oil
Fatigue & Low Energy	Peppermint (inhalation), Lemon (diffusion)
Fungal Infections	Tea Tree (25-50% dilution), Castor Oil, Coconut Oil
Hair Loss & Thinning	Castor Oil (scalp massage), Rosemary Oil, Peppermint
Headaches	Peppermint (temples), Lavender, Frankincense
IBS & Digestive Issues	Peppermint (enteric-coated capsules), Lemon, Coconut Oil
Inflammation (Systemic)	Frankincense (Boswellia), Castor Oil packs
Insomnia & Sleep Issues	Lavender, Frankincense
Muscle Pain & Soreness	Peppermint, Castor Oil, Frankincense
Oral Health	Coconut Oil (oil pulling), Olive Oil (pulling)
Scarring	Rosehip, Frankincense, Castor Oil
Skin Barrier (Damaged)	Argan Oil, Olive Oil, Rosehip
Stretch Marks	Castor Oil, Rosehip, Argan Oil

"Nature itself is the best physician." *Hippocrates*
